EDUCATION

Marmara University (2015 - 2018)

Bachelor's degree, Electrical and Electronics Engineering
(Transferred from Gazi University)

Gazi University (2013 - 2015)

Bachelor's degree, Electrical and Electronics Engineering

LANGUAGES

English (B2 Level)

SKILLS

Backend

- C#
- .NET
- ASP.NET Core
- Node.js
- Microservices Architecture
- RESTful APIs
- RabbitMQ
- Redis
- PostgreSQL
- MSSQL
- MongoDB

DevOps & Tools

- CI/CD
- Docker
- Azure DevOps
- Git

Frontend

- React
- Angular
- JavaScript
- TypeScript

Experienced in designing and developing distributed, microservices-based applications using modern .NET and JavaScript technologies. Product-oriented, with a strong focus on software architecture, code quality, and long-term maintainability. Passionate about teamwork, knowledge sharing, continuous learning, and helping teams build better software together.

EXPERIENCE

TAV Technologies (Senior Software Engineer)

JUNE 2026 - PRESENT

Contributing to **Treva**, a digital travel marketplace that brings airport passenger services together on a single platform to deliver a seamless end-to-end journey experience.

Key contributions:

- Contribute to the architecture, design, and end-to-end development of backend services within a distributed microservices ecosystem.
- Design and develop scalable, event-driven microservices using **.NET, ABP Framework, RabbitMQ, Redis, PostgreSQL, Docker, and Kubernetes**.
- Deliver end-to-end features across backend services and **Angular**-based user interfaces.
- Collaborate with cross-functional teams while contributing to CI/CD and delivery processes through Azure DevOps.

Borusan Lojistik (Senior Software Engineer)

DEC 2024 - APR 2026
(1 yrs 3 mos)

Contributing to **Digital Logistics Platform**, a large-scale microservices-based system built with modern .NET technologies. Primarily contributed to the Auction and Contract domains within its distributed architecture.

Key contributions:

- Developed and maintained backend services following **DDD, Clean Architecture, and CQRS principles**.
- Designed and implemented event-driven communication between distributed services using **RabbitMQ**.
- Built and maintained Docker-based development environments, **Azure DevOps CI/CD pipelines**, and **Redis**-backed distributed caching solutions.
- Designed and optimized data access layers using **EF Core, PostgreSQL, MSSQL, and MongoDB**.
- Contributed to migrating domain services from **MSSQL** to **PostgreSQL** to improve maintainability and standardize the data platform.
- Collaborated with cross-functional teams in an Agile/Scrum environment.

OriginZero Technologies (Co-Founder & Senior Software Engineer)

AUG 2021 - DEC 2024
(3 yrs 5 mos)

Co-founded OriginZero, a subsidiary of Anaks R&D, focused on developing a low-code workflow automation and visualization platform enabling low-code workflow creation, third-party API integrations, and dashboard design.

Technical Contributions:

- Developed a full-stack low-code workflow automation platform using **.NET Core, Node.js, React, TypeScript, and Python**
- Designed and developed scalable **RESTful APIs and microservices**
- Implemented distributed communication, caching, and real-time messaging using **RabbitMQ, Redis, and WebSocket**.
- Designed database architectures using **PostgreSQL and MongoDB**
- Built and maintained **Docker**-based development and deployment environments, and contributed to CI/CD pipelines using **Azure DevOps**

Leadership Contributions:

- Led business strategy and key technology and architecture decisions
 - Built and managed development and design teams
 - Led technical hiring processes and established the engineering culture
 - Ensured product delivery and cross-functional alignment
-

Anaks R&D Corporation (Senior Software Engineer)

SEP 2020 - DEC 2024
(4 yrs 4 mos)

Anaks R&D is a technology company specializing in industrial automation, IoT, industrial software, and digital solutions for the chemical industry. The company develops innovative software products and custom engineering solutions for industrial customers.

Key Contributions:

- Developed user-friendly software solutions for industrial automation systems
 - Built small to medium-scale ERP systems using **.NET, React, Angular, and MS SQL**
 - Designed and developed IoT applications using **Node.js, React, and MongoDB**
 - Conducted market research to identify customer needs and emerging trends
-

APRA Engineering & Consulting (Software Engineer)

JUL 2018 - AUG 2020
(2 yrs 2 mos)

The company focuses on industrial software and automation solutions, including traceability systems, production monitoring, energy management, image processing, and smart agriculture solutions.

Key contributions:

- Collaborated closely with customers to analyze business requirements and translate them into software solutions.
 - Developed full-stack web applications for industrial automation systems, handling data exchange with field devices to support traceability, process management, and reporting using **React, .NET Core, Node.js, and Python**
 - Managed databases using **MSSQL, PostgreSQL, and MongoDB**
 - Developed cloud-based smart agriculture software solution using **.NET Core, React and PostgreSQL**
 - Worked on projects for clients such as Tofaş, Ford Otosan, Accuride, Rözmaş, and Orhan Automotive
-

Group Renault (Engineering Intern)

JUL 2017 - JAN 2018
(7 mos)

- Worked with the automation team at Renault's Bursa production facility on industrial automation systems
- Designed and developed an automation management application using **C#, WinForms, Visual Basic, and Siemens WinCC**
- Designed intuitive user interfaces to improve production traceability and real-time monitoring
- Revised and optimized PLC programs in collaboration with production engineers
- Delivered a production-ready system that remained actively used in the assembly line
